

Build Request: Automatic Post–Customer Acceptance Sales Workflow

Implement the workflow that starts when a customer accepts an approved Sales Order.

Do not redesign the existing Sales Order flow. Add automatic workflow task creation, status changes, notifications and audit history after the event **Customer Accepted**.

Core rule

A Sales Order may be customer-accepted only after:

1. Sales has created it.
2. Warehouse has confirmed stock availability.
3. Checker has approved it.
4. Sales has shared it with the customer.
5. Customer acceptance has been recorded.

When the Sales Order status changes to **CUSTOMER_ACCEPTED**, the system must automatically create the next task based on the payment term selected on that Sales Order.

Required document statuses

Use these statuses or equivalent clear enums:

Sales Order:

DRAFT

AWAITING_WAREHOUSE_CHECK

AWAITING_CHECKER_APPROVAL

AWAITING_CUSTOMER_ACCEPTANCE

CUSTOMER_ACCEPTED

AWAITING_ADVANCE_PAYMENT

READY_FOR_INVOICE

INVOICE_IN_PROGRESS

READY_FOR_DISPATCH

DISPATCHED

COMPLETED

CANCELLED

Proforma:

DRAFT

SENT_TO_CUSTOMER

AWAITING_PAYMENT

PARTIALLY_PAID
PAID
EXPIRED
CANCELLED

Sales Invoice:

DRAFT
AWAITING_APPROVAL
APPROVED
AWAITING_IRN
IRN_GENERATED
AWAITING_DISPATCH_DETAILS
EWAY_BILL_GENERATED
DISPATCHED
PARTIALLY_PAID
PAID
OVERDUE
CANCELLED

Dispatch Order:

DRAFT
AWAITING_DISPATCH_DETAILS
READY_FOR_EWAY_BILL
READY_TO_DISPATCH
PARTIALLY_DISPATCHED
DISPATCHED
CANCELLED

Payment-term branches

Branch 1 — Net credit terms

Examples: Net 30, Net 45, Net 60.

When Sales Order becomes CUSTOMER_ACCEPTED:

1. Automatically create a **Finance task**:
 - Task title: Create Final Sales Invoice
 - Linked document: Sales Order
 - Assigned role: Finance
 - Status: Open
 - Due date: same day, unless configured otherwise.
2. Change Sales Order status to:

- READY_FOR_INVOICE
- 3. Do not wait for customer payment before invoice or dispatch preparation.

Branch 2 — 100% advance

When Sales Order becomes CUSTOMER_ACCEPTED:

1. Automatically create a **Finance task**:
 - Task title: Create Proforma Invoice for Advance
 - Linked document: Sales Order
 - Assigned role: Finance
2. Change Sales Order status to:
 - AWAITING_ADVANCE_PAYMENT
3. Do not create a Final Invoice task yet.
4. Do not create a Warehouse Dispatch task yet.

After Finance creates and sends the Proforma:

1. Create a **Treasury task**:
 - Task title: Confirm Customer Advance Receipt
 - Linked documents: Sales Order and Proforma
 - Assigned role: Treasury

When Treasury marks the full advance as received:

1. Automatically create a **Finance task**:
 - Task title: Create Final Sales Invoice
 - Linked document: Sales Order and Proforma
 - Assigned role: Finance
2. Change Sales Order status to:
 - READY_FOR_INVOICE

Branch 3 — Part advance + balance later

Example: 30% advance, balance in 30 days from invoice date.

When Sales Order becomes CUSTOMER_ACCEPTED:

1. Automatically create a **Finance task**:
 - Task title: `Create Proforma Invoice for Advance`
 - Linked document: Sales Order
 - Assigned role: Finance
2. Change Sales Order status to:
 - `AWAITING_ADVANCE_PAYMENT`
3. Do not create a Dispatch task yet.

When Treasury confirms the required advance amount has been received:

1. Automatically create a **Finance task**:
 - Task title: `Create Final Sales Invoice`
 - Linked documents: Sales Order and Proforma
 - Assigned role: Finance
2. The final invoice must show:
 - Invoice Total
 - Advance Received
 - Advance Adjusted
 - Balance Payable
 - Balance Due Date
3. Calculate balance due date from:
 - `invoiceDate + agreedBalanceDays`

Final Invoice to Dispatch workflow

When Finance creates the Final Sales Invoice:

1. Link it mandatorily to the accepted Sales Order.
2. Auto-fill customer, address, product lines, quantity, prices, GST and selected payment term from the Sales Order.
3. Do not debit inventory at this stage.
4. Create an invoice approval task only if invoice approval is enabled in system settings.

When the Final Sales Invoice is approved, or immediately after creation if approval is not enabled:

1. Automatically create a **Finance task**:
 - Task title: **Generate IRN**
 - Linked document: Final Sales Invoice
 - Assigned role: Finance
 - Status: Open
2. Change invoice status to:
 - **AWAITING_IRN**

For the current version, IRN may be manually recorded. In the future, it will be received through the Tally integration.

When IRN is successfully recorded/generated:

1. Change invoice status to:
 - **IRN_GENERATED**
2. Automatically create a **Warehouse task**:
 - Task title: **Prepare Dispatch Order**
 - Linked documents: Sales Order, Final Sales Invoice and IRN
 - Assigned role: Warehouse
3. Automatically create a Draft Dispatch Order linked to the Sales Order and Final Invoice.
4. Change invoice status to:
 - **AWAITING_DISPATCH_DETAILS**

Warehouse dispatch task

The Warehouse user must see the generated Dispatch Order in their own queue.

Warehouse must enter:

- Dispatch warehouse / location
- Packed quantity
- Cartons / packages
- Gross weight, if applicable
- Dispatch date and time
- Transport mode

- Transporter name and transporter ID, if applicable
- Vehicle number or LR / GR / AWB number
- LR / GR / AWB date
- Approximate distance, if required
- Driver name and phone, if applicable

When Warehouse saves all mandatory dispatch details:

1. Change Dispatch Order status to:
 - `READY_FOR_EWAY_BILL`
2. Automatically create a **Finance task**:
 - Task title: **Generate E-Way Bill**
 - Linked documents: Final Sales Invoice, IRN and Dispatch Order
 - Assigned role: Finance
3. Change invoice status to:
 - `AWAITING_DISPATCH_DETAILS` until details are complete;
 - then `IRN_GENERATED` with E-Way Bill task pending, or use a more specific equivalent status.

When Finance records/generated the E-Way Bill:

1. Save:
 - E-Way Bill Number
 - E-Way Bill Date
 - Validity Date
 - E-Way Bill status
2. Change Dispatch Order status to:
 - `READY_TO_DISPATCH`
3. Automatically create a **Warehouse task**:
 - Task title: **Confirm Physical Dispatch**
 - Linked documents: Sales Order, Final Invoice and Dispatch Order
 - Assigned role: Warehouse

When Warehouse confirms physical dispatch:

1. Debit inventory only for the dispatched quantity.
2. Update Sales Order dispatched quantity.
3. Update Sales Order status:
 - DISPATCHED if full quantity is dispatched;
 - otherwise keep a clear PARTIALLY_DISPATCHED state.
4. Update Final Invoice status to:
 - DISPATCHED or PARTIALLY_DISPATCHED.
5. Mark the dispatch task as completed.

Task creation rules

Every automatically created task must contain:

taskId
taskType
title
assignedRole
assignedUser, if one is available
linkedSalesOrderId
linkedProformaId, if applicable
linkedInvoiceId, if applicable
linkedDispatchOrderId, if applicable
currentStatus
dueDate
createdAt
createdBy = SYSTEM
nextAction

Rules:

1. Do not create duplicate tasks if the event is retried.
2. Use idempotency checks based on:
 - document ID;
 - task type;
 - workflow stage;
 - active/incomplete task status.
3. Every automatic action must create an Activity History entry, for example:

SYSTEM created Finance task: Create Final Sales Invoice.

Reason: Sales Order SO-2026-00842 was accepted by customer.

4. Send an email and in-app notification to the assigned role/user.
5. Show the task in:
 - the relevant functional queue;
 - the linked document timeline;
 - Management Command Overview as a count only, where relevant.
6. Users may view linked documents across teams where required, but may perform only their own assigned action.

Required acceptance tests

Create automated tests for:

1. Net 30 Sales Order accepted:
 - Finance Final Invoice task is created.
 - No Proforma task is created.
 - No Warehouse Dispatch task is created until IRN is generated.
2. 100% Advance Sales Order accepted:
 - Finance Proforma task is created.
 - Final Invoice task is not created before Treasury confirms payment.
 - After payment confirmation, Final Invoice task is created.
3. 30% Advance + balance in 30 days:
 - Proforma is created for 30%.
 - Treasury confirms receipt.
 - Final Invoice shows advance adjusted and correct balance due date.
4. Final Invoice approved:
 - Generate IRN task is created once only.
5. IRN generated:
 - Draft Dispatch Order is created automatically.
 - Warehouse Prepare Dispatch Order task is created once only.
6. Warehouse completes dispatch details:

- Generate E-Way Bill task is created for Finance.
7. E-Way Bill generated:
- Warehouse Confirm Physical Dispatch task is created.
8. Warehouse confirms physical dispatch:
- Inventory is debited exactly once.
 - Sales Order and Invoice dispatch quantities/statuses update correctly.
9. Retry every event twice:
- Confirm that duplicate tasks, duplicate Dispatch Orders and duplicate inventory debits are never created.
