

Procurement Workflow — Focused UI Improvements

Keep the workflow unchanged

Supplier → Purchase Order → Checker Approval → Supplier → Purchase Invoice → Checker Approval → Treasury Payment → GRN → Inventory Credit

1. Supplier Setup

The current supplier form has the required information. Improve presentation only.

Keep:

- Supplier name
- GSTIN and PAN
- Address
- Contact details
- Payment terms
- Status
- Notes

Add or clearly show:

- Assigned Procurement Officer
- Default Delivery Warehouse
- Multiple approved payment terms

Use:

Supplier, never Vendor or Creditor.

2. Supplier List

The current line:

“The companies whose invoices you finance”

must be removed.

Replace it with:

“Manage supplier details, purchase commitments, payment terms and supply status.”

Replace **Open Exposure** with:

Outstanding Payables or **Open Purchase Commitments**

The Supplier list should show:

- Supplier
- Primary Contact
- Default Payment Term
- Outstanding Payables
- Open Purchase Orders
- Status
- Action

3. Purchase Order

The Purchase Order screen should remain simple.

Keep visible:

- System-generated PO number
- PO date
- Supplier
- Delivery warehouse
- Expected delivery date
- Payment term for this order
- Expected payment date
- Supplier quotation number and date
- Product lines
- Totals
- Notes

Make these corrections:

- **Bill To** should be the company's own billing address.
- Remove the field labelled **Debtor**.
- **Supplier Pickup / Dispatch Address** should auto-fill from the selected supplier.
- Let the user select one of the payment terms already approved for that supplier.
- Keep detailed delivery clauses, packing, partial shipment and cancellation terms inside a collapsed **Additional Delivery Terms** section.

Use the main action:

Submit for Approval

4. Procurement Workbench

The Procurement landing page should show only procurement work.

Top cards:

- POs Awaiting Approval
- Supplier Invoices Pending
- Deliveries Due This Week
- GRNs Pending

Main working table:

Document	Supplier	Value	Current Status	Next Step	Owner	Action
----------	----------	-------	----------------	-----------	-------	--------

Examples of next steps:

- Submit for Checker Approval
- Send PO to Supplier
- Record Supplier Invoice
- Send Invoice for Approval
- Request Treasury Payment
- Record GRN
- Follow Up for Delivery

5. Purchase Invoice and GRN

These must remain separate.

Purchase Invoice

- Recorded by Procurement after receiving the supplier invoice.
- Linked to the PO.
- Sent to Checker.
- Once approved, moves to Treasury for payment or payment scheduling.
- Does not credit inventory.

GRN

- Created by Warehouse when goods physically arrive.
- Linked to the PO and, where available, Purchase Invoice.

- Records received quantity, accepted quantity, rejected quantity and warehouse location.
- Credits inventory only after Warehouse confirms the GRN.

6. Design Rules

- White, pale blue-grey and navy interface.
- One blue primary action.
- Green only for approved, paid, received or completed.
- Amber only for pending action or delivery due.
- Red only for delayed, rejected or overdue.
- Do not use finance, exposure or funding language within Procurement.
- Each document must show: **Current Status, Next Step and Owner.**
-
