

Sales Workflow — Focused UI Improvements

Keep the workflow unchanged

Customer → Sales Order → Warehouse Check → Checker Approval → Customer Acceptance → Proforma, if advance is required → Treasury Payment Confirmation → Final Invoice → IRN → Dispatch Order → E-Way Bill → Physical Dispatch

The recommendations below improve clarity only.

1. Customer Setup

Rename: Debtor → Customer.

Keep the form simple and show these sections:

- Customer details
- Billing and delivery addresses
- Contact and ownership
- Approved payment terms

Allow multiple approved terms against a customer, such as:

- 100% Advance
- Net 30 Days
- 30% Advance + Balance in 30 Days

When creating a Sales Order, the user selects one approved term.

2. Sales Order

Keep these fields:

- Customer and addresses
- Customer contact
- Assigned salesperson
- Payment term for this order
- Expected dispatch and delivery dates
- Buyer's Order Number
- Reference Number and Date
- Product lines
- Prices, GST, discount and totals

Remove transport details from this screen:

- Dispatch document number
- Transporter
- Vehicle details
- E-way bill details

These are entered later by Warehouse in the Dispatch Order.

Use the main action:

Submit for Warehouse Check

3. Proforma Invoice

Create a Proforma only when an advance is required.

It must be linked to the accepted Sales Order. Customer, lines, prices, tax and terms should fill automatically.

Finance only needs to confirm:

- Proforma date
- Valid until date
- Advance percentage or amount
- Notes

Show clearly:

- Advance requested
- Balance payable after final invoice

Use the action:

Create & Send to Customer

4. Final Invoice

A Final Invoice must be linked to the accepted Sales Order.

Auto-fill and lock:

- Customer
- Addresses
- Product lines
- Price
- GST
- Payment term

Show clearly:

- Invoice Total
- Advance Received
- Advance Adjusted
- Balance Payable
- Payment Due Date
- Expected Receipt Date

Only a payment confirmed by Treasury may be adjusted as advance.

Use the action:

Create & Send for Approval

5. Design Rules

- Use **Customer**, never Debtor.
- Keep white and pale-blue backgrounds with navy text.
- Use blue for the main action only.
- Use green only for confirmed / paid.
- Use amber only for pending action.
- Use red only for overdue, cancelled or error.
- Keep each page divided into short, clearly named sections.
- Always show the current status and next action on the Sales Order and Invoice views.
-
